My first key metric is 42 and the second is 314. The sum of the two is 356, and the first is $\approx 13.4\%$ of second. The key metric for 2026 is 3.141592653589793, or rounded to 3 digits it is 3.142. A metric that contains a string is also possible, such as “hello world”.
